Principles of Systematic Zoology Ernst Mayr, 2015-06-16 This text is intended for senior or postgraduate courses in systematics, particularly animal taxonomy. Practical suggestions for taxonomic practice are included and explanations of the basic concepts of taxonomy are emphasized as well as the definition of traditional terms used in taxonomy. The treatment of taxonomy is in two parts. Part A is devoted to microtaxonomy and Part B is devoted to macrotaxonomy. There is a new chapter on the methods of numerical taxonomy, and an extensive treatment of the new approaches in taxonomy synopsis may belong to another edition of this title.

The Philosophy of Zoology John Fleming, 1822 Animals are related to one another, and to the objects which surround them, in such a manner, as to be dependent on a variety of circumstances for the preservation of their existence, their dispersion over the globe, and their power of accommodation to the changes of the seasons. They are likewise to be viewed as admitting of division into classes and subordinate groups, according to the external or internal characters which they exhibit. In the investigation of these characters, a variety of methods are employed, and many rules have been prescribed, to regulate the principles of zoological nomenclature. In order to enter more fully into these important subjects, we shall distribute the present volume into Four Parts. In the first, we shall consider the Condition of Animals in reference to their Duration, Distribution, and Economical Uses.
