SOFSEM 2005: Theory and Practice of Computer Science Maria Bieliková,Charon-Bost,Ondrej Sýkora,Peter Vojtás,2004-12-27 This volume contains papers selected for presentation at the 31st Annual Conference on Current Trends in Theory and Practice of Informatics - SOFSEM 2005, held on January 22-28, 2005 in Liptovský Jan, Slovakia. The series of SOFSEM conferences, organized alternately in the Czech - public and Slovakia since 1974, has a well-established tradition. The SOFSEM conferences were originally intended to break the Iron Curtain in scientific change. After the velvet revolution SOFSEM changed to a regular broad-scope international conference. Nowadays, SOFSEM is focused each year on selected aspects of informatics. This year the conference was organized into four tracks, each of them complemented by two invited talks: - Foundations of Computer Science (Track Chair: Bernadette Charron-Bost) - Modeling and Searching Data in the Web-Era (Track Chair: Peter Vojtáš) - Software Engineering (Track Chair: Maria Bieliková) - Graph Drawing (Track Chair: Ondrej Sýkora) The aim of SOFSEM 2005 was, as always, to promote cooperation among professionals from academia and industry working in various areas of informatics. Each track was complemented by two invited talks. The SOFSEM 2005 Program Committee members coming from 13 countries evaluated 144 submissions (128 contributed papers and 16 student research - rum papers). After a careful review process (counting at least 3 reviews per paper), followed by detailed discussions in the PC, and a co-chairs meeting held on October 8, 2005 in Bratislava, Slovakia, 44 papers (overall acceptance rate 34.

*Emerging Devices for Low-Power and High-Performance Nanosystems* Simon Deleonibus, 2018-12-13 The history of information and communications technologies (ICT) has been paved by both evolutive paths and challenging alternatives, so-called emerging devices and architectures. Their introduction poses the issues of state variable definition, information processing, and process integration in 2D, above IC, and in 3D. This book reviews the capabilities of integrated nanosystems to match low power and high performance either by hybrid and heterogeneous CMOS in 2D/3D or by emerging devices for alternative sensing, actuating, data storage, and processing. The choice of future ICTs will need to take into account not only

their energy efficiency but also their sustainability in the global ecosystem.
